

CONEXER

It is possible to install multiple Conexer™ digital SD & HD modulators in a system and for systems such as this the units will need to be specially programmed.

The illustration below shows 4 units in a system but the process is the same in the cases of 5 or more units. The frequency and LCN numbers are for illustration purposes although these settings must be unique and not conflict with other units in the system.

The transport stream ID (TSID) and service/program ID (SID) must be unique values also and it is recommended to set them as below:

| | Unit no | Frequency (kHz) | TSID | Service ID/Program ID | LCN |
|--------|---------|-----------------|------|-----------------------|-----|
| DMHD01 | 1 | 474000 | 101 | 1 | 100 |
| DMHD01 | 2 | 482000 | 102 | 2 | 101 |
| DMSD01 | 3 | 490000 | 103 | 3 | 102 |
| DMSD04 | 4 | 498000 | 104 | 4 | 103 |
